

T-ISS has added the Asbestos Safety Kit, **IMPA No. 33.0967**, to its product range. This product is used by a vessels crew to remove any harmful asbestos materials in a safe way, while the ship is operating at sea. The kit is not meant to be used for large scale asbestos removal, for example during the docking of the vessel.

Most of the times, the Asbestos Removal Kit is part of the Asbestos Management Plan. In this plan, the locations of asbestos are indicated. Also, the plan covers the preventive measures that need to be taken in order to avoid exposure to the dangerous and harmful asbestos fibers.

All items in the kit are produced according to the EU quality standards for asbestos removal. All parts are approved by certified companies, such as **KIWA Oesterbaai**, and for the Inventory of Hazardous Materials, such as **DNV GL, Rina, Bureau Veritas and Lloyd's Register**.

The Asbestos Safety Kit contains the following items:

- HEPA vacuum cleaner including cleaner bags
- Disposable boots / boot covers
- Spray bottle with impregnating fluid
- Asbestos waste bags
- Asbestos warning stickers
- Full instruction manual
- Tyvek overall
- Gloves
- Face mask
- Duct tape
- Glue spray
- All certificates

The kit comes with a clear instruction manual that shows how to use it in a safe and adequate way.
