## Safety Marking Tape Photoluminescent

T-ISS

Revision 2023

Product description

Safety Marking Tape Photoluminescent is used to show contours in spaces. The outlines of (emergency) exits, obstacles and areas to be kept clear or for example, fire extinguishers can be marked with luminous Safety Marking Tapes.

Using photoluminescent safety marking tape is important because it significantly improves visibility in low-light conditions, enhances emergency response, ensures compliance with safety regulations, and ultimately saves lives by guiding occupants to safety during critical situations.
