Rescue Grab Hook

T-ISS

Product description

The T-ISS Rescue Grab hook is a specialized tool designed for use in emergency rescue operations involving helicopters. The hook is constructed in two parts for convenient stowage and transportation, given its assembled length of 4.15 meters.

The primary purpose of the Rescue Grab Hook is to facilitate the evacuation of individuals from fire situations. Blunted points are designed to grip clothing without causing tears. The handle is crafted from non-conductive 40mm straight-grained Ash, while the head is forged from heavy-duty steel and colored red for visibility.
