Rescue Grab Hook

T-ISS™
safety suppliers

a Heijboer Safety Group company

Product description

The T-ISS Rescue Grab Hook is a rescue tool designed for emergency situations, particularly helicopter crash and fire rescue operations. With a total assembled length of 4.15 meters, it provides extended reach for the safe and efficient evacuation of individuals.

The hook features a steel head with blunted points to grip clothing without causing unnecessary damage. The handle is made from straight-grained ash and helps prevent fabrics from tearing.

For easy storage and transportation, the hook consists of four sections connected by screwed brass ferrules. The Rescue Grab Hook is suitable for Helicopter Crash Equipment and is CAP437 compliant.
