Safety Marking Tape PVC

T-ISS™
safety suppliers

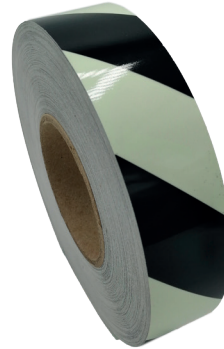

a Heijboer Safety Group company

Product description

T-ISS Safety Marking Tape is a multifunctional photoluminescent Low Location Lighting (LLL) solution designed to improve safety and visibility in low-light and emergency situations. It can be used to clearly mark escape routes, emergency exits, obstacles, safety equipment, and areas that must remain clear.

The tape is widely used on cruise ships, ferries, RoRo vessels, oil tankers, and in offshore and industrial environments. Made from durable, self-adhesive PVC, it is easy to apply and is primarily intended for indoor use. The material is non-toxic and non-radioactive. Its photoluminescent properties absorb ambient light and provide a clearly visible yellow-green glow in darkness.

Technical Specifications

Available dimensions: 40 mm x 10 m
80 mm x 10 m
(other widths available on request)

Available qualities: M or XXL

Available colours: green stripes
red stripes
black stripes

Certificates and Standards

Approvals

Green Passport

Standards

Complies with IMO Resolution A.752(18) and ISO 15370 for Low Location Lighting systems in marine applications.

Product Information

Art. no: depends on dimensions, quality and colour.

HS code: 39209990.90

IMPA: depends on dimensions, quality and colour.

ISSA: depends on dimensions, quality and colour.

Features and Contents

Day colour: Light yellow
Glow colour: Yellow-green
Easy and quick to apply
Supplied in convenient, easy-to-handle packaging
Store clean and dry at temperatures up to +30°C

M: 150 mcd/m² after 10 min / 15 mcd/m² after 60 min
XXL: 200 mcd/m² after 10 min / 35 mcd/m² after 60 min
